

H. Wikidot

The wiki is used with the Shaping Outcomes tutorial as a place where course participants can get to know one another, share ideas, and submit logic models or assignments.

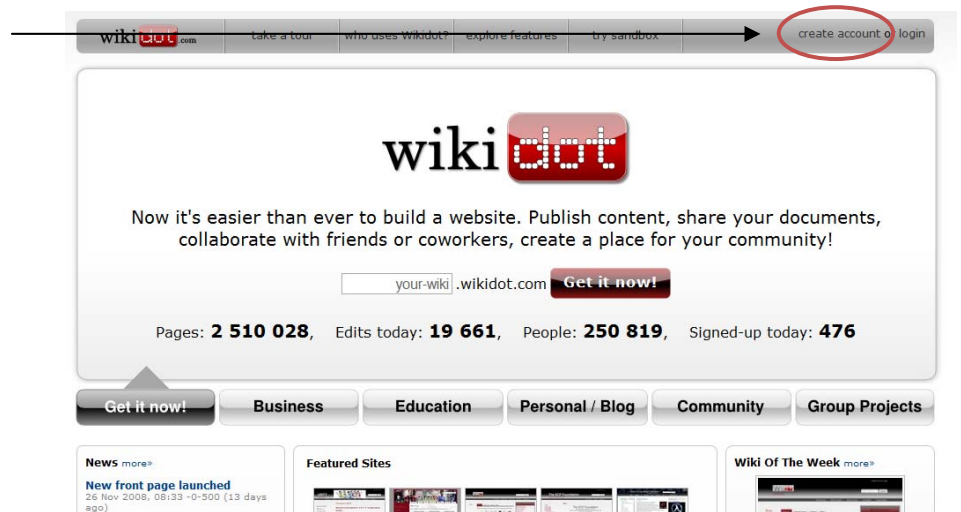

Wiki definition, per Wikipedia.org:

A *Wiki* (['wi:.ki:] <wee-kee> or ['wi.ki:] <wick-ey>) is a type of website that allows users to add, remove, or otherwise edit and change most content very quickly and easily via website.

Creating an Account at Wikidot.com

<http://www.wikidot.com/>

Click on create account

Get a new user account at Wikidot.com

You are about to create a new Wikidot.com account that will give you access to dozens of wiki sites within the wikidot sites cluster as well as a possibility to create your very own sites.

If you want to learn more about Wikidot before creating the account – visit the Wikidot.com main site.

Your screen name:

This is your new name at Wikidot.com.

Your email address:

Preferred language: English Polish

Password:

Between 6 and 20 characters.

Password (repeat):

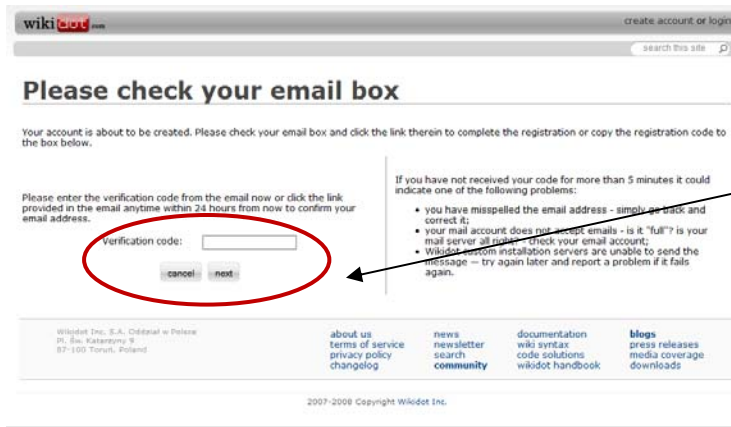

Are you a human?

Please write the code you can see above. Upper/lowercase does not matter. This is to prevent automated bots.

Please confirm: I have read and agree to the Terms of Service.

- Your account data will be sent using a secure method.
- Please give the email address you have access to. Email + password will be used later to log in.
- We recommend using your **real-life name** as a screen name.

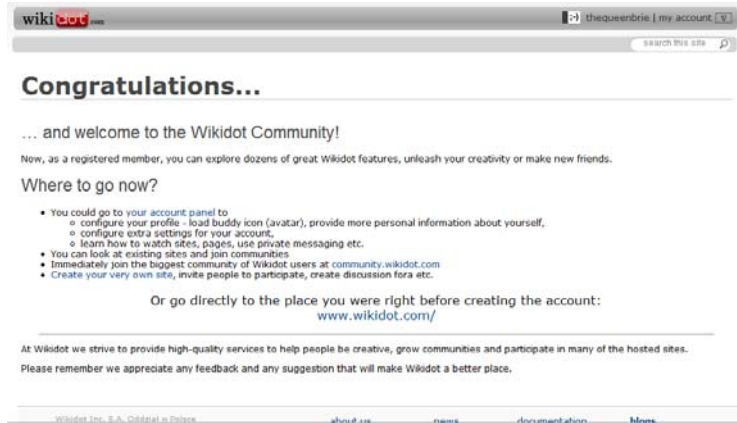

Fill in the information and click

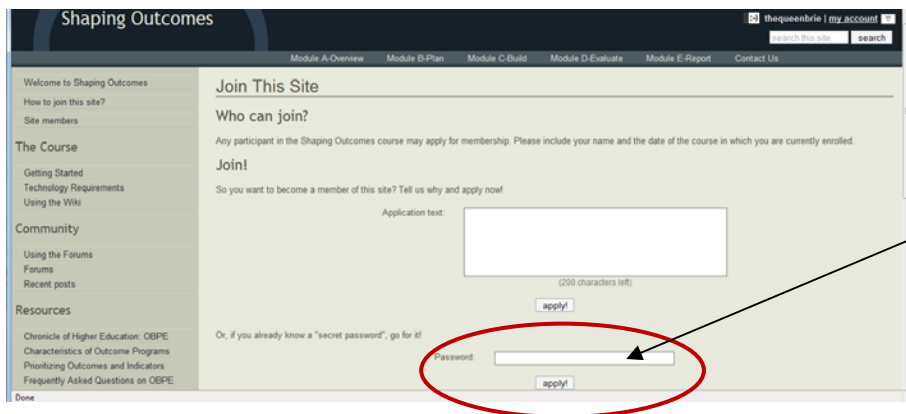

Check your email and enter the verification code sent by Wikidot.

Click **next**

You now have a Wikidot account.

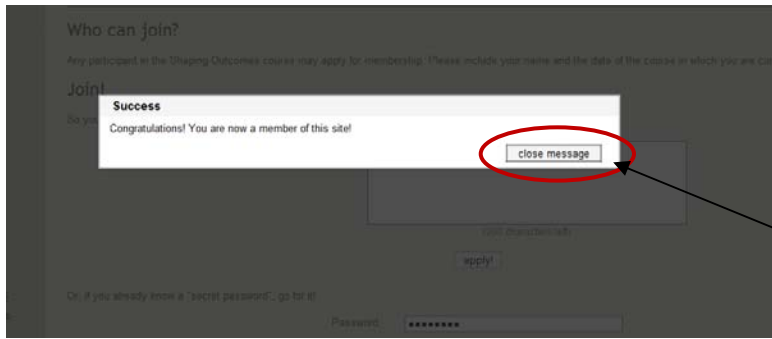

Now, go to <http://shapingoutcomes.wikidot.com/system:join>

Enter the password:

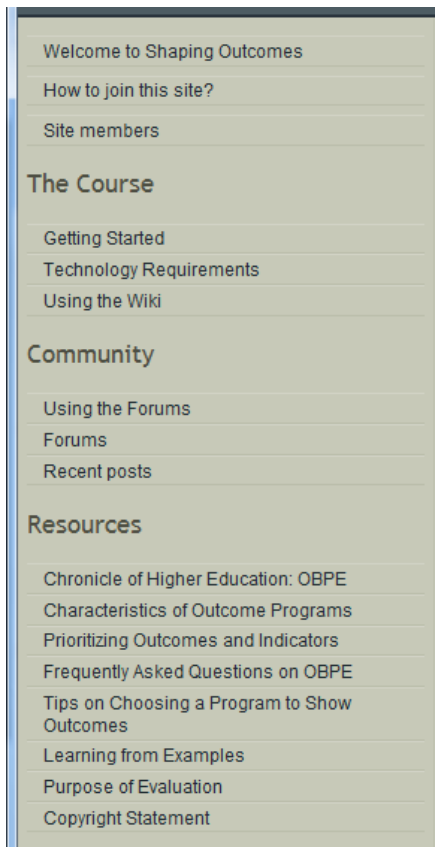

outcomes

in the password area and click apply!

You should get a message saying that you are a member of the site. Once you become a member, we will enable moderator rights where you can edit various pages and forum posts. Close the message. Now you can look at the wiki organization.

Wiki Navigation

Side Navigation:

The Course: Basics of the wiki

Community: Access to the forums

Resources: Pages containing resources for the participants.

Note: the sidebar may change from time to time with the addition of new pages.

Top Navigation:

The modules contain drop-down menus for participants on the various module exercises and information. These drop-down menus are visible as you hover over the module titles.

RSS: [new threads](#) | [new posts](#)

Each course has its own area for forum postings, broken down into several discussions. To post to any forum, click on the forum name, such as Hello Colleagues:

Click on create a new thread.

You do not need to know any special programming languages in order to post to the forum, because there are buttons to help you format your text. Those are explained on the next page. Once you have given your post a title and included the text, you can cancel, preview, or post.

Editing the Wiki: Buttons

Virtually anywhere you can edit the wiki, you will find these buttons:

Here is an explanation of the above buttons. You can also view the wikidot help page on syntax, where they give examples of what you can do: <http://www.wikidot.com/doc:wiki-syntax>.

Button	Function	Wiki Syntax
	Heading – When you hover over this, headings 2 through 6 are also available.	+ Heading 1 ++ Heading 2 +++ Heading 3, and so on Note that headings do not need closing tags
	Bold	**bolded text**
	Italics	//italicized text//
	Strikethrough	--strikethrough text--
	Teletype (monotype) text	{{teletype text}}
	Quoted text	> quoted text

	Superscript	<code>^superscript^</code>
	Subscript	<code>„subscript„</code>
	Raw text (escape parsing)	<code>@@raw text@@</code>
	Horizontal line	<code>-----</code> (six dashes)
	Div Block Element	<code>[[div]] block contents [[/div]]</code>
	Clear floats	<code>~~~~</code>
	Table Wizard	Allows you to choose rows, columns, header, etc.
	Table of Contents	<code>[[toc]]</code>
	URL Link	<code>[http://www.example.com describe link]</code>
	URL Link Wizard	Allows you to enter the URL and also identify the text you want to be visible (anchor text).
	Page Link	<code>[[[page name]]]</code> Used when you are linking to a page within our wiki site.
	Page Link Wizard	Allows you to enter the page name and the text you want to be visible (anchor text). Again, for pages within our wiki.
	Image	<code>[[image source]]</code>
	Image Wizard	Allows you to input information for an image.
	Embed Video	<code>[[embedvideo]] paste the html for the video here (Google Video, YouTube, Revver, Dailymotion) [[/embedvideo]]</code>
	Embed Audio	<code>[[embedaudio]] paste the html for the audio here (odeo) [[/embedaudio]]</code>
	Code Block	<code>[[code]] insert the code here [[/code]]</code>
	Code Block Wizard	Enables you to choose the type of code to be inserted.
	Numbered List	<code># list item</code>

	Bulleted List	* list item
	Increase List Nesting	Moves list character
	Decrease List Nesting	Moves list character
	Definition List	: item : definition
	Footnote	[[footnote]] footnote text [[/footnote]]
	Mathematical Equation	[[math]] insert LaTeX equation here [[/math]]
	Inline Mathematical Expression	[[\$ insert LaTeX equation here \$]]
	Equation Reference	
	Bibliography	[[bibliography]] : label : full source reference [[/bibliography]]
	Bibliography Citation	[[((bibcite label))]]

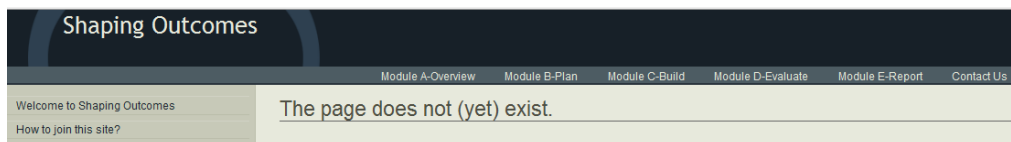

Creating New Content: Pages

Note: If you are an instructor working through the Shaping Outcomes project, Shaping Outcomes Tech Support will be more than happy to add content for you beyond forum postings – just send your request to outcomes@iupui.edu with the copy you would like added and any other pertinent information. We'll let you know how soon we can upload it: no more than 5 business days.

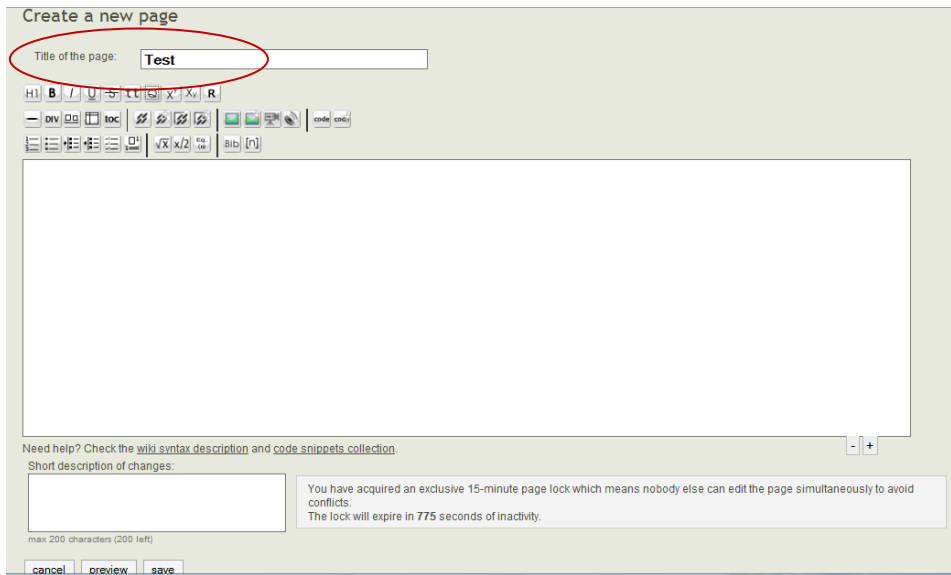

At the bottom of each wiki page you will see the option to add a new page:

Type the name of the new page (we are using Test) and click . Notice that the page does not yet exist:

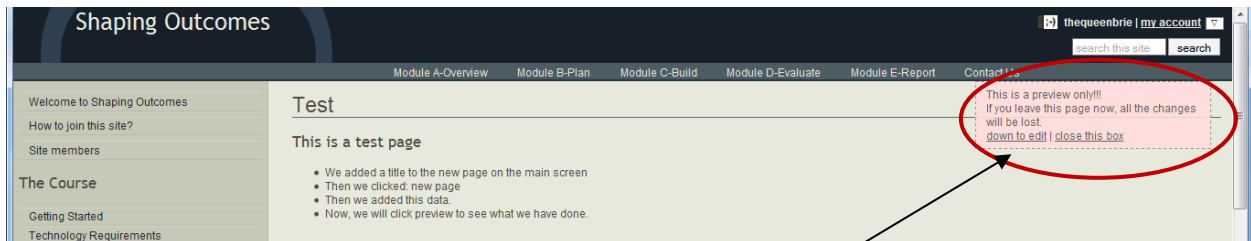

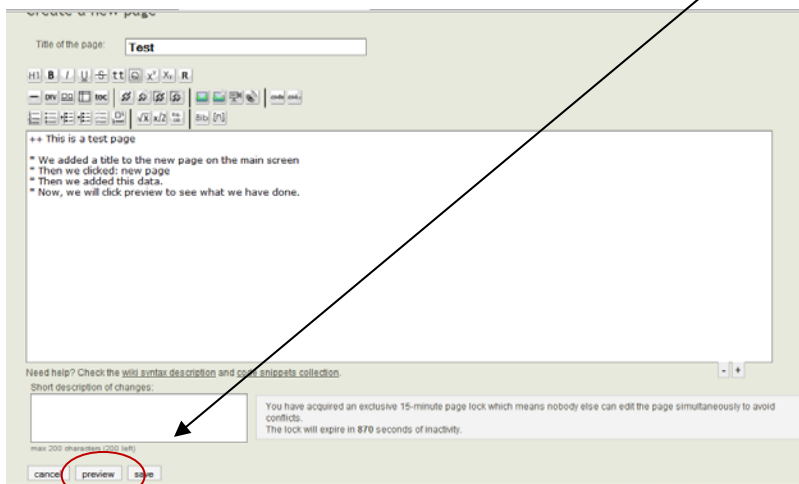

Scroll down, and you can edit your page:

Note the title of the page: it is the title we gave the page in the first step.

After adding some information, we are ready to preview

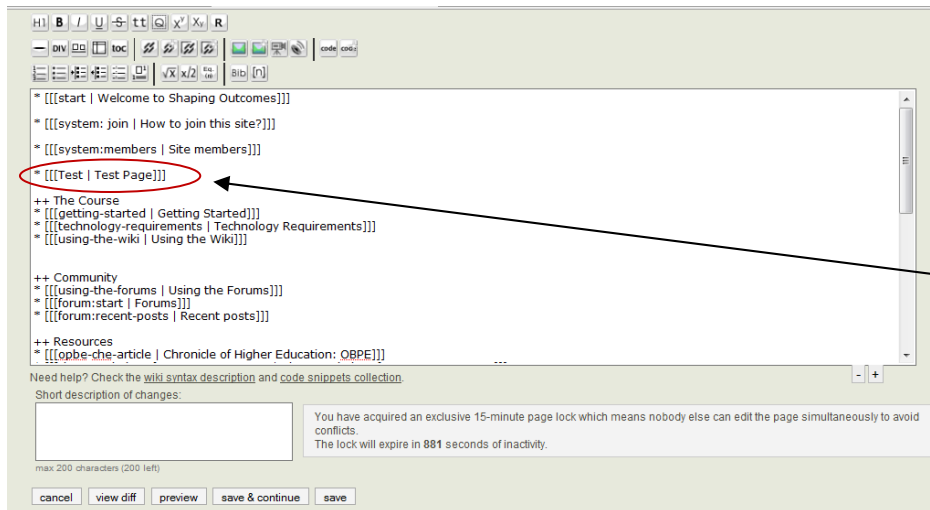

Wikidot lets you know that you are merely previewing your page. You can scroll down to cancel, preview again, or save. I will save.

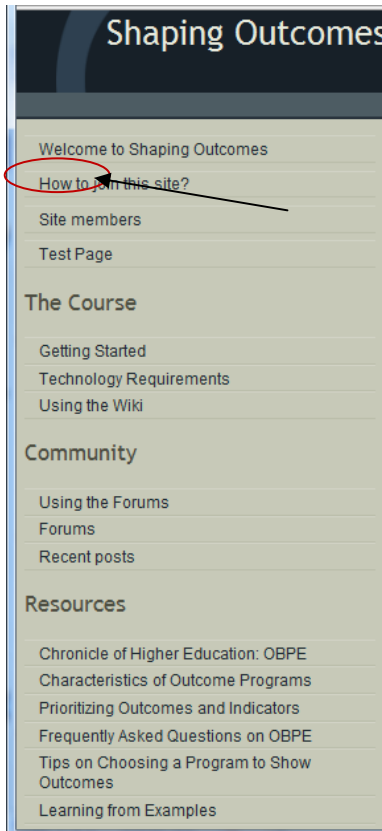

Now we have a page with the title of Test, but no one can get to it because it is not listed on the site. I want to put this in the side navigation, so I have to edit that panel (at the bottom of the page where we saw the Add a new page option).

Step two of this process is to scroll down to the bottom of the page so that I can add a link to the new page by editing the existing page:

If you look here, you can see that I placed the Test page under the main section of the wiki contents. The first part is the name of the wiki page, separated by a bar symbol (|) and then Test Page is the link name, or anchor. Save & continue allows you to save changes and continue editing; save allows you to save the page and move on to something else.

Save the page.

And the new page is now listed in the side navigation.

What if we wanted to add the content to the top navigation?

<http://shapingoutcomes.wikidot.com/nav:top>

1. Click on edit at the bottom of the page
2. Insert text where appropriate
3. Save

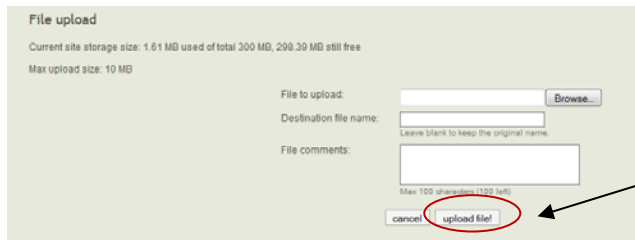

Generally speaking, instructors will not want to edit the top navigation since that pertains to the participant tutorials.

Uploading Files to the Wiki

Files are saved to pages. Let's add a file to the test page I just created. Again, at the bottom of the page is a link to view files.

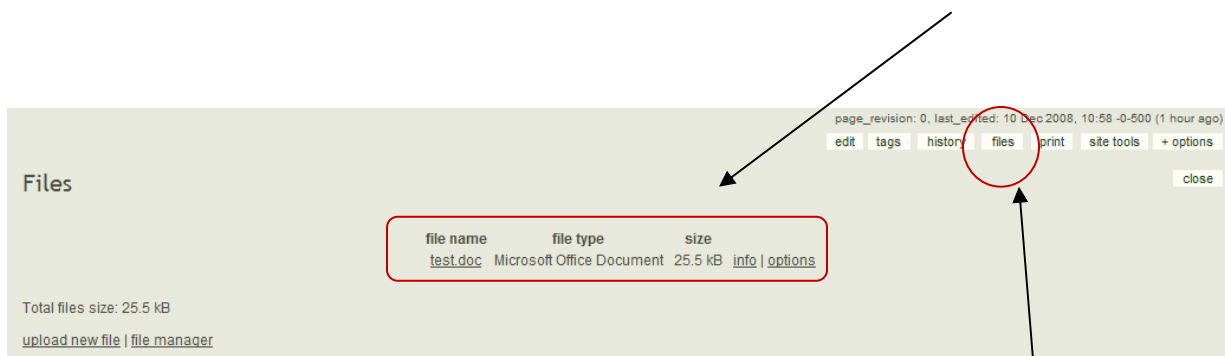

After clicking on files, the following appears at the bottom of the page. Click on upload new file.

Now we find the file (browse to locate it on your machine if necessary), leave the destination file name blank, and add comments if we wish. Then upload the file.

Once the file has been uploaded to the page, it is now visible at the bottom of the page:

Note: Unfortunately this is the only time the files are viewable in a default view. To view files on each page, one must click on the files link at the bottom of each page.

In order to create a link that will be viewable permanently, it is a good idea to link the document in the page itself. The best way to accomplish this is to first find the location of the document, by clicking on info, beside the document details.

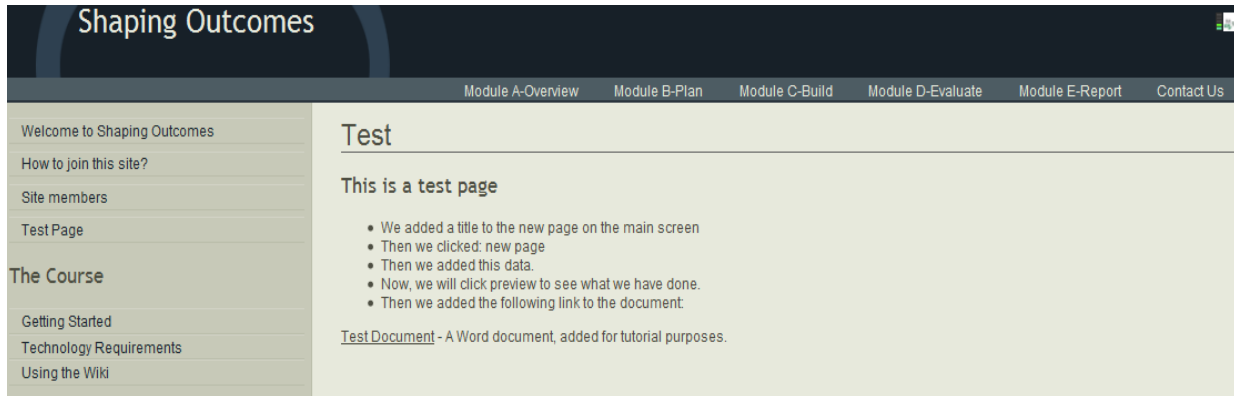

The location of the test document I uploaded is <http://shapingoutcomes.wikidot.com/local--files/test/test.doc>

To create a link to this document on the test page itself, I want to do the following:

1. Go to the page where I want to have a link to the text document (Test).
2. Click edit
3. Insert the following text at the end of the document:
[<http://shapingoutcomes.wikidot.com/local--files/test/test.doc> Test Document] - A Word document, added for tutorial purposes.

The brackets indicate that it is a url. Add a space after the location and then include the anchor, or the text that will be viewable and clickable. Then I added a little bit of information about the document.

4. Save.

We now have the Word document linked in the page.

You can add a link by using the syntax I used, or you can use the Link Wizard.
